The SMR1D is a truly precision molded surface mountable resistor offering all the elements of precision; including lowest TCR, tight tolerances, long term stability, low noise, low thermal EMF, and non-measurable voltage coefficient. It utilizes the Bulk Metal<sup>®</sup> Foil technology for the resistive element with its inherent and legendary low predictable TCR\* and long term stability. This surface mountable product affords similar performance to the time tested S102 molded through-hole product.

Voltage division with tight tracking < 3ppm can be achieved with 2 randomly selected units even with a large ratio between the two values.

The molded SMR1D, while slightly larger and heavier than the Bulk Metal<sup>®</sup> Foil VSM surface mountable chip resistor, has a rugged construction capable of withstanding significant thermal cycling and allows for board installation without concern for tolerance shifts due to manufacturing processes or mechanical stresses.
